

Procuretrak™

KNOWLEDGE

ACTION

Finally, a next-generation technology that transforms the way end users work with their data to make decisions. Procuretrak™ is the enabler for performance improvement for all core strategic Procurement functions, such as SRM, Spend Analysis, Category Management and Supplier Rationalisation. It is a fully implemented solution, with your data mapped and cleansed from **whatever data sources you require**. Procuretrak™ works on two fundamentals: 1. The creation of a universal data set from all required sources and 2. Unrivalled end user functionality for drilling and analyses. Users can go from macro to micro instantly, never losing contact with the most granular item at any stage.

Procuretrak™ does not output static reports but is a real-time, dynamic system which you can drill-down to the critical information you need to take action. (Visuals can be saved and printed as PDF etc).

At a fraction of the cost of older technologies, Procuretrak™ will immediately demonstrate superior value for money.

Procuretrak™ is used by large multinationals and many public sector entities, with tangible results.

About PI

PI has been handling procurement data for many sectors for 25 years, taking in huge amounts of information and returning it to clients in a form that enables decisions, instantly. PI is ISO 27001 compliant.

Procuretrak™ key features:

- Extensibility. Include any data source in your analysis, **in one place**.
- Include rich data such as photos, video, audio, Google earth, all accessible from any point.
- All terminology and references remain your preferred nomenclature.
- Bespoke is standard, we work with you to design the perspectives you want.
- Scalability. Global/country/dep. / category views can be combined or separate
- Complete flexibility on categorisation, e.g. one supplier can relate to more than one category.
- The underlying transactions are visible at any stage if required.
